Press Release FOR IMMEDIATE RELEASE

85-Year-Old Innovator Revolutionizes Storytelling with AI Platform MakeAIBook

[Sydney Jan 2025] – At 85 years young, Graham Justice, an extraordinary individual with a lifetime of adventures and achievements, is breaking new ground in the world of AI and creative writing with the launch of MakeAIBook, an innovative platform designed to empower anyone, from children to seniors, to create personalized, interactive stories using the power of AI.

Combining decades of experience in travel, aviation, and entertainment—including a varied career as a steward aboard ocean liners, years with British Airways, and an accomplished run as a magician—Graham has brought his unique creative vision to the forefront of modern technology. The result is MakeAIBook, a platform that blends traditional storytelling with cutting-edge AI, making storytelling accessible, engaging, and educational for all.

Inspiring Creativity and Education

MakeAIBook offers ready-to-customize templates for novels, children's stories, travel guides, cookbooks, and more. Users simply copy and paste a template into ChatGPT and follow simple prompts to personalize their story. They can modify characters, settings, and plot twists to reflect their unique vision, making every story truly their own.

The platform also caters to a wide audience with content ranging from fairy tales for children as young as five to in-depth topics like artificial intelligence, sexuality, and cultural exploration. By encouraging creativity and critical thinking, MakeAIBook fosters a lifelong love of learning and self-expression.

"As someone who has traveled the world and seen so many stories unfold, I wanted to create a tool that empowers others to tell their own stories," said Graham. "At 85, I'm thrilled to combine my passion for creativity, technology, and education to inspire the next generation of storytellers."

A Platform Like No Other

What makes MakeAIBook truly unique is its combination of personalization, accessibility, and Graham's inspiring vision:

AI-Powered Personalization: Users can customize every aspect of their story, making it a reflection of their unique imagination.

Educational Focus: Each story includes thoughtful lessons on resilience, friendship, and other life themes.

Inclusive Access: Free templates ensure accessibility, particularly for underserved schools and remote communities.

Creative Freedom: Structured templates simplify storytelling, while still allowing endless possibilities for personalization.

More Than Stories

The platform doesn't stop at storytelling. Graham's lifelong passion for innovation extends into robotics, with his creation of a 6-axis LEGO robot featured in one of the templates, "The Life of Joe." This robot, set to be available for purchase soon, will further integrate technology and creativity, giving users another way to engage with storytelling in the real world.

Looking to the Future

As AI technology evolves, so will MakeAIBook. Future updates include animated sections, real-time updates, and even interactive travel guides. Graham's vision is to develop a global community of storytellers who can share their creations, inspire each other, and learn together.

How to Access MakeAIBook

During the initial launch phase, most templates are free, giving users the chance to experience this revolutionary concept firsthand. Detailed instructions make it easy for users to compile and adapt their stories into personalized books.

Join the Revolution

Graham's inspiring journey from magician and traveler to tech innovator is a testament to the idea that it's never too late to dream big. MakeAIBook is more than a platform—it's a movement to encourage creativity, connect communities, and reshape the way we engage with stories.
